

2011 Community Assessment

Health & Quality of Life in San Mateo County

Sponsored by
**The Healthy Community Collaborative
of San Mateo County**

Summer 2011

We are pleased to deliver the sixth Community Assessment of the San Mateo County Community (full report and all previous reports available at www.smhealth.org/hpp or <http://www.plsinfo.org/healthysmc>). The main objective of this report is to gain insight into current conditions and trends of various health indicators and to identify areas for improvement. The data provides a lens through which the overall health and well being of county residents can be assessed. It is our hope that the findings of this report will serve as a planning tool for key stakeholders to make data-driven policy recommendations that can efficiently and effectively meet the needs of county residents as well as inspire new programs that focus on the most critical health care needs of our diverse population.

The assessment affirms that San Mateo County compares favorably to our state and the nation on many health and quality of life measures. For a majority of San Mateo County residents, our community is viewed as a wonderful place to live, work, raise a family and lead a healthy life.

However, the report shows that certain segments of the population in San Mateo County still do not experience good health and high quality of life. It also shows that some less than optimal health and quality of life issues are more prevalent here than in other parts of the state and country. We hope that this report can be used by the community to build on its strengths and focus on ongoing efforts on the key health problems experienced by people living here.

While many of the health issues presented here are complex and interrelated and require changes in public policy, the environment and the health care system, there are many things

that an individual can do to be healthier. We strongly encourage every resident to take at least these steps towards a healthier future:

- Eat at least five servings of fruits and vegetables per day
- Exercise at least 20-30 minutes on most days of the week
- Don't smoke
- Maintain a proper weight
- If you drink alcohol, drink in moderation, no more than 1-2 drinks per day

Sincerely,

The Healthy Community Collaborative of San Mateo County

SCOPE OF THIS ASSESSMENT

The Healthy Community Collaborative of San Mateo County is a group of San Mateo County organizations interested in the community's health. The Healthy Community Collaborative (HCC) was formulated in 1995 of hospitals and health related organizations in San Mateo County to focus and address community health needs of the county residents. The HCC oversees the triennial Community Needs Assessment: Health & Quality of Life in San Mateo County. The HCC and individual hospitals utilize the Community Needs Assessment to identify opportunities to be addressed through programs or policy. These initiatives and programs are developed to address community health and service efforts which will benefit and improve the health of local residents. In addition, the Hospital Consortium of San Mateo County, which includes the leadership of the hospitals and local Health Department, provides direction to HCC regarding countywide priority health initiatives.

As in 1995, 1998, 2001, 2004 and 2008, the Collaborative continues to actively determine the indicators to be studied and conducts a community needs assessment of San Mateo County. This study is part of a larger and longitudinal study, encompassing many years worth of data and trends, and should be viewed in that context. Note that, for the purposes of this assessment, "community health" is not limited to traditional health measures. This definition includes indicators relating to the quality of life (e.g., affordable housing, child care, education and employment), environmental and social factors that influence health, as well as the physical health of the county's residents. This reflects the Collaborative's view that community health is affected by many factors and cannot be adequately understood without consideration of trends outside the realm of health care.

The **2011 Community Assessment: Health & Quality of Life in San Mateo County** is designed to serve as a tool for guiding policy and planning efforts, and the information provided here should be used to formulate strategies to improve our quality of life. For participating not-for-profit hospitals, this assessment will also serve to assist in developing Community Benefit Plans pursuant to Legislative Bill 697. This report is also designed to assist facilities in meeting the new federal requirements under Health Care Reform, also known as the Patient Protection and Affordable Care Act (PPACA). In conducting this assessment, the goals of the Healthy Community Collaborative are twofold:

- To produce a functional, comprehensive community needs assessment that can be used for strategic planning of community programs and as a guideline for policy and advocacy efforts; and
- To promote collaborative efforts in the community and develop collaborative projects based on the data, community input, and group consensus.

Key Findings

- San Mateo County is among the most culturally and ethnically diverse counties. Asian and Hispanic residents, along with seniors, are expected to continue to become increasingly greater proportions of the population. We are not adequately prepared for this enormous demographic shift.
- There are two San Mateo Counties: one for the economic “haves” and one for the economic “have nots.” The gap between these two is growing.
- The actual causes of premature death are rooted in behavior, and it is estimated that as many as 50% of premature deaths are due to health risk behaviors such as tobacco use, poor diet, a lack of exercise, alcohol use, etc. Despite this, the vast majority of our community does not exhibit the most basic healthy behaviors.
- Individual health behaviors are deeply influenced by public policy and place (i.e., neighborhood conditions) to a far greater degree than we recognize. The health of San Mateo County can be improved through a greater focus by all organizations on public policy changes and place-based strategies.
- Quality health care services in the county are, for the most part, not a problem. Access and affordability are a significant problem. The lack of a comprehensive healthcare “system” is a failing, unsustainable model.
- More than one out of four San Mateo County adults believe access to mental health, substance abuse, and dental services in the county are “fair” or “poor.”
- The Internet is likely to replace physicians in the near future as the place where most people get most of their healthcare information.
- The proportion of births with adequate prenatal care has risen steadily among Black and Hispanic women, lessening the racial health disparities that have persisted in prenatal care.
- The rise in C-section rates is a disturbing trend.
- Our children are not doing much better than adults in exhibiting healthy behaviors. This will severely impact their future health.
- Adolescents engage in a variety of risky behaviors such as alcohol and drug use, tobacco use, violence, and sexual behavior. It is important to encourage in our children and adolescents those assets which will deter harmful behaviors and promote healthy development.

- Key adolescent assets where additional effort should be placed are: 1) increasing the amount of sustained caring and supportive adult/youth relationships; and 2) increasing meaningful participation of youth in community activities.
- The proportion of adults aged 60 and older is expected to roughly double over the next four decades, and Hispanics and Asians are projected to increase their representation considerably in the older population. As the fastest-growing population segment, the health and social needs of older adults require increasing attention.
- Falls are a key issue leading to hospitalization, loss of independence, and death among seniors. More resources should be directed toward this preventable condition.
- Looking at mortality rates, we are healthier now than any time in the past. However, there are storm clouds on the horizon and, unless things change, our children will lead shorter lives than ours.
- Cancers are a leading cause of death in San Mateo County. Area incidence and mortality rates vary dramatically by race/ethnicity.
- Few residents consume adequate amounts of fruits/vegetables, however, this appears to be slowly improving. Access to fresh fruits and vegetables is still an issue in some areas.
- Heart disease and stroke death rates continue to decline, while reported prevalence of high blood pressure and high blood cholesterol continues to rise.
- Since 1998, there have been significant increases in the prevalence of asthma, chronic lung disease and diabetes among San Mateo County adults.
- After decreasing for several years, we are beginning to see a disturbing rise in both gonorrhea and chlamydia.
- Poisonings (including drug overdoses), firearms and motor vehicle accidents are the leading causes of injury deaths in San Mateo County.
- Substance use (alcohol, tobacco and other drugs) is one of the most serious threats to the health of our community. Substance use carries a significant social impact, contributing to such social conditions as homelessness, violence, poverty and disease. Youth substance use is a particular concern.
- Binge drinking among young adults, especially males aged 18 to 24, has increased significantly over the last several years.

- Depression, isolation and loneliness are prevalent in San Mateo County. Mental health services to deal with depression are inadequate, as are the variety of community structures needed to deal with loneliness and isolation.
- While San Mateo County excels by most conventional measures, there are subgroups within the population who do not share the wealth. The prosperity of recent years has led to an extremely high cost of living that significantly impacts low- and middle-income families.
- A minimum-wage income in San Mateo County would be entirely consumed by child care costs for one infant.
- Nearly a third of youth aged 13 to 17 have no supervision after school.
- Disparities in childhood opportunities lead to lifelong and even multi-generational disparities in health and economic success. There is a need to increase the access of high quality comprehensive early childhood education and care to low-income families and families of color.
- We have criminalized biology.
- More than one out of four Black and Hispanic respondents believe racial and cultural tolerance in San Mateo County is “fair” or “poor,” and these proportions are increasing. While public transit use is up, it remains underutilized. We should implement appropriate incentives to encourage use of public transportation.
- Most people feel very safe in their neighborhoods, but this varies significantly by race/ethnicity.

MCH-34. Major Congenital Causes of Infant Mortality.....	213
MCH-35. Major Perinatal Causes of Infant Mortality	214
MCH-36. Vaccine Coverage at Age 24 Months by County Region (Complete 4-3-1 Series)	215
MCH-37. Vaccine Coverage at Age 24 Months by County Region	

(Complete DTP/DTaP4)	216
MCH-38. Vaccine Coverage at Age 24 Months by County Region (Complete OPV/IPV3)	217
MCH-39. Vaccine Coverage at Age 24 Months by County Region (MMR1)	218
MCH-40. Vaccine Coverage at Age 24 Months by Race/Ethnicity	219
MCH-41. Vaccine Coverage at Ages 24, 27.5, 36 and 48 Months.....	220
MCH-42. Vaccine Coverage at Ages 24, 27.5, 36 and 48 Months (DTP/DTap4, OPV/IPV3, MMR1 and complete 4-3-1 Series)	221
MCH-43. Children Receiving Early MMR1.....	222
MCH-44. Children Receiving Early MMR1 by Age in Months.....	223
MCH-45. Vaccine Coverage at Ages 24, 27.5, 36 and 48 Months (DTP/DTap4, OPV/IPV3, MMR1 and complete 4-3-1 Series)	224
MCH-46. Vaccine Coverage at Ages 24, 27.5, 36 and 48 Months (DTP/DTap4, OPV/IPV3, MMR1 and complete 4-3-1 Series)	225

2011 Health and Quality of Life Projections 226

2011 Projections

1. Percent of San Mateo County Residents Exhibiting Healthy Behaviors	227
2. Percent of San Mateo County Residents who are overweight	228
3. Percent of San Mateo County Residents eating five or more servings of fruits and vegetables per day	229
4. Mean Score - Community Evaluation of Safety	230
5. Family Income needed for Self-sufficiency.....	231
6. Percent of third graders reading at or above the 50th National Percentile Rank by district.....	232
7. Food Stamp Cases (San Mateo July 06- May 10).....	233
8. Percent of San Mateo County Residents who perceive viewpoint/lifestyle tolerance to be fair	234
9. Trends in Crime, San Mateo County 1996-2011	235
10. Satisfaction with healthcare received is fair/poor	236
11. Rating of personal health status- Mean Score.....	237
12. Primary Source of Health Information.....	238
13. Health Care Insurance Coverage (18-64).....	239
14. Percent of San Mateo County Residents who lack healthcare coverage (18-64)	240
15. Percent of 7th graders meeting 6 of 6 Fitness Standards	241
16. Total Years of Potential Life Lost – All Causes	242
17. Rate of Years of Potential Life Lost (YPLL) in San Mateo County by Race /Ethnicity	243
18. Percent of SMC Residents who are current smokers	244
19. SMC Residents who exhibit one or more Cardiovascular Risk Factor.....	245
20. SMC Residents who do not participate in regular vigorous activities	246
21. Told more than once that Blood Pressure was high.....	247
22. Percent of SMC Residents who have been told that their blood cholesterol level was High.....	248
23. Percent of SMC Residents who are obese	249
24. Percent of SMC Residents who are diabetic	250

25. Binge Drinkers among adults aged 18-24 yrs	251
26. Would not know where to access treatment for drug related problems for self or family member if needed	252
27. SMC Residents who have experienced depression lasting two or more years	253

METHODS

Two research methodologies were applied to produce the final analyses found in this report.

The first five chapters of this report involved analysis of the most current data from various sources to produce and update the graphs and tables.

- Cancer data was obtained from Surveillance, Epidemiology and End Results (SEER) Program (www.seer.cancer.gov).
- Hospitalizations data was obtained from the Office of Statewide Planning and Development, Patient Discharge Data
- HIV data was obtained HIV/AIDS Reporting System (HARS)
- Infectious disease data was obtained from the San Mateo County Disease Control Unit, California Department of Health Services, Centers for Disease Control and Prevention (CDC)
- Mortality and Maternal and Child Health Data were obtained from California Department of Health Services, Center for Health Statistics, Death and Birth Records.
- Vaccine data were obtained from the San Mateo County Immunization Program

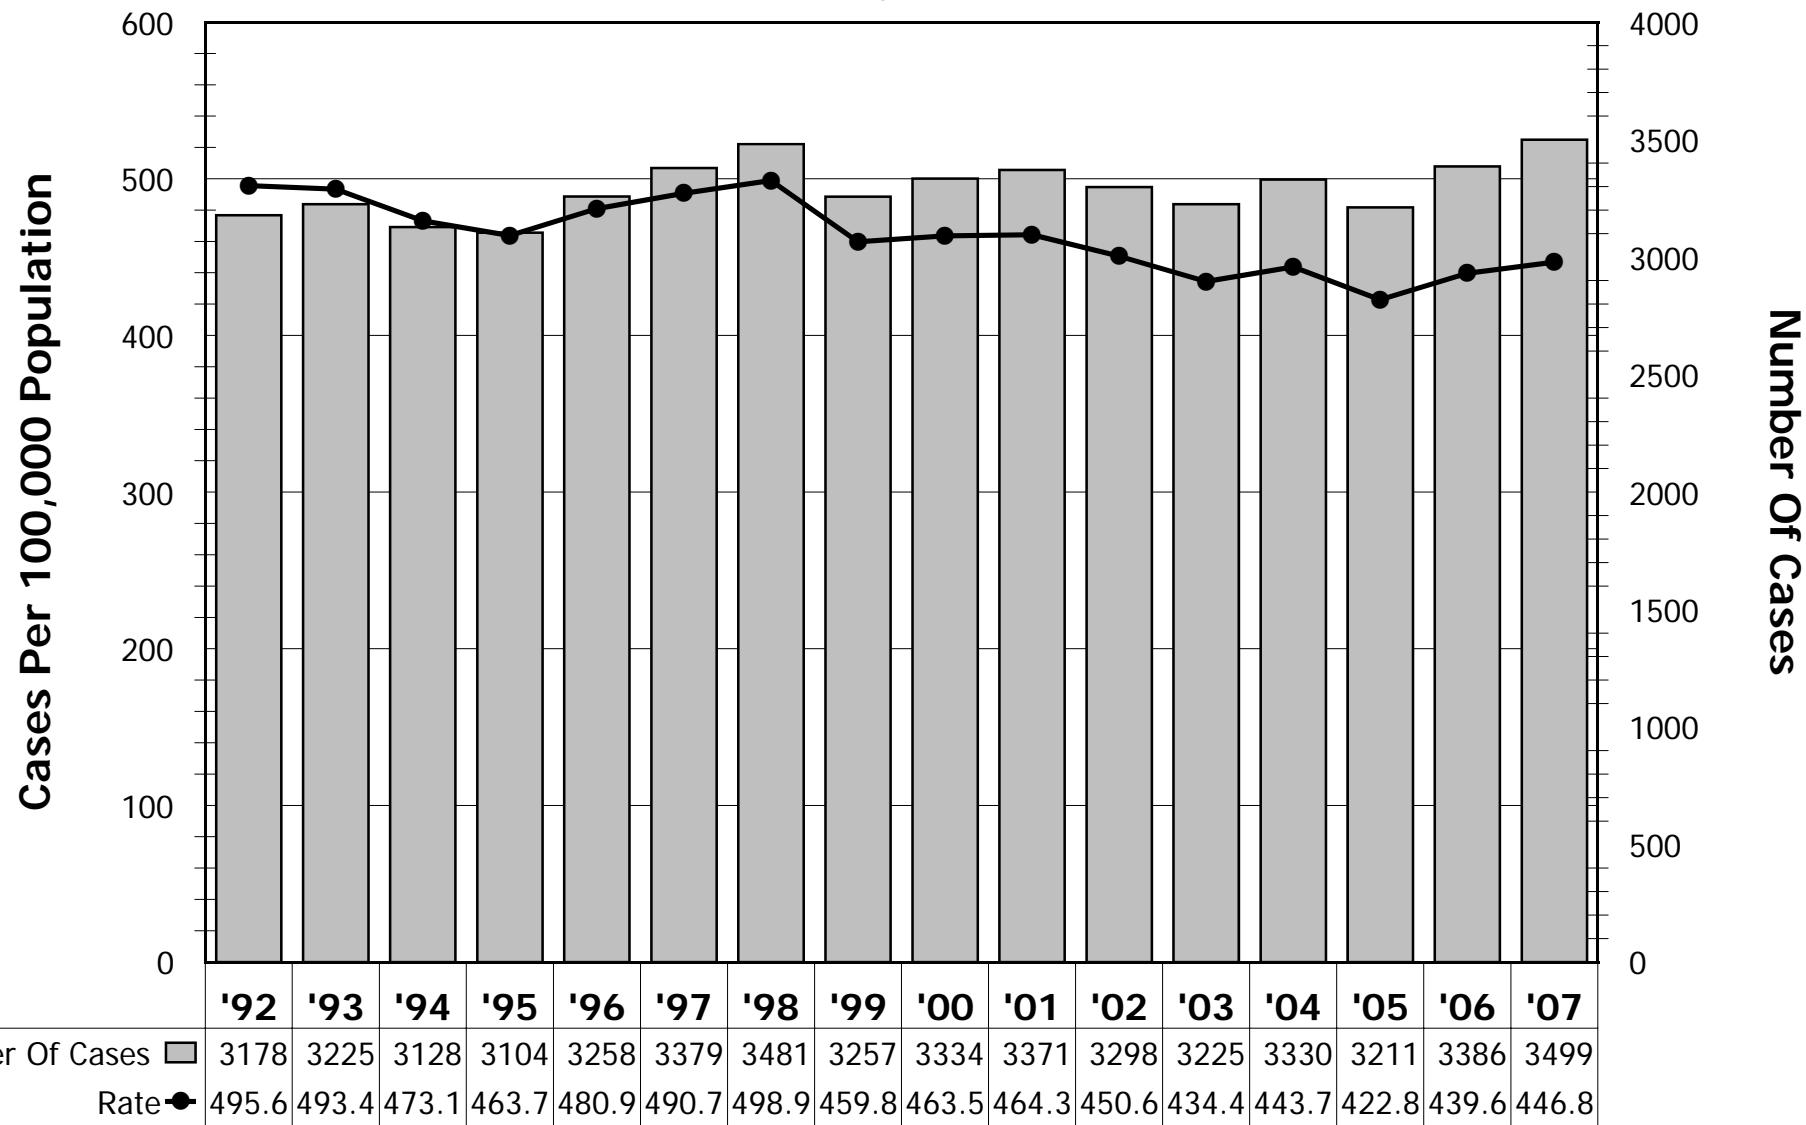

All rates in these analyses are age-adjusted unless otherwise noted. The age-adjusted rates are standardized using the Year 2000 United States Population standards

The last chapter shows 2011 projections for selected indicators from the Health and Quality of Life Survey. Because a survey was not conducted this year, data from the previous four reports were used to produce trend lines and obtain regression equations for selected quality of life indicators. The equations were then used to project the trends for 2011. It should be noted that these are projections only, and should be interpreted and used with caution.

Cancer

Incidence Of Cancer (All Cancer Sites)

San Mateo County, 1992-2007

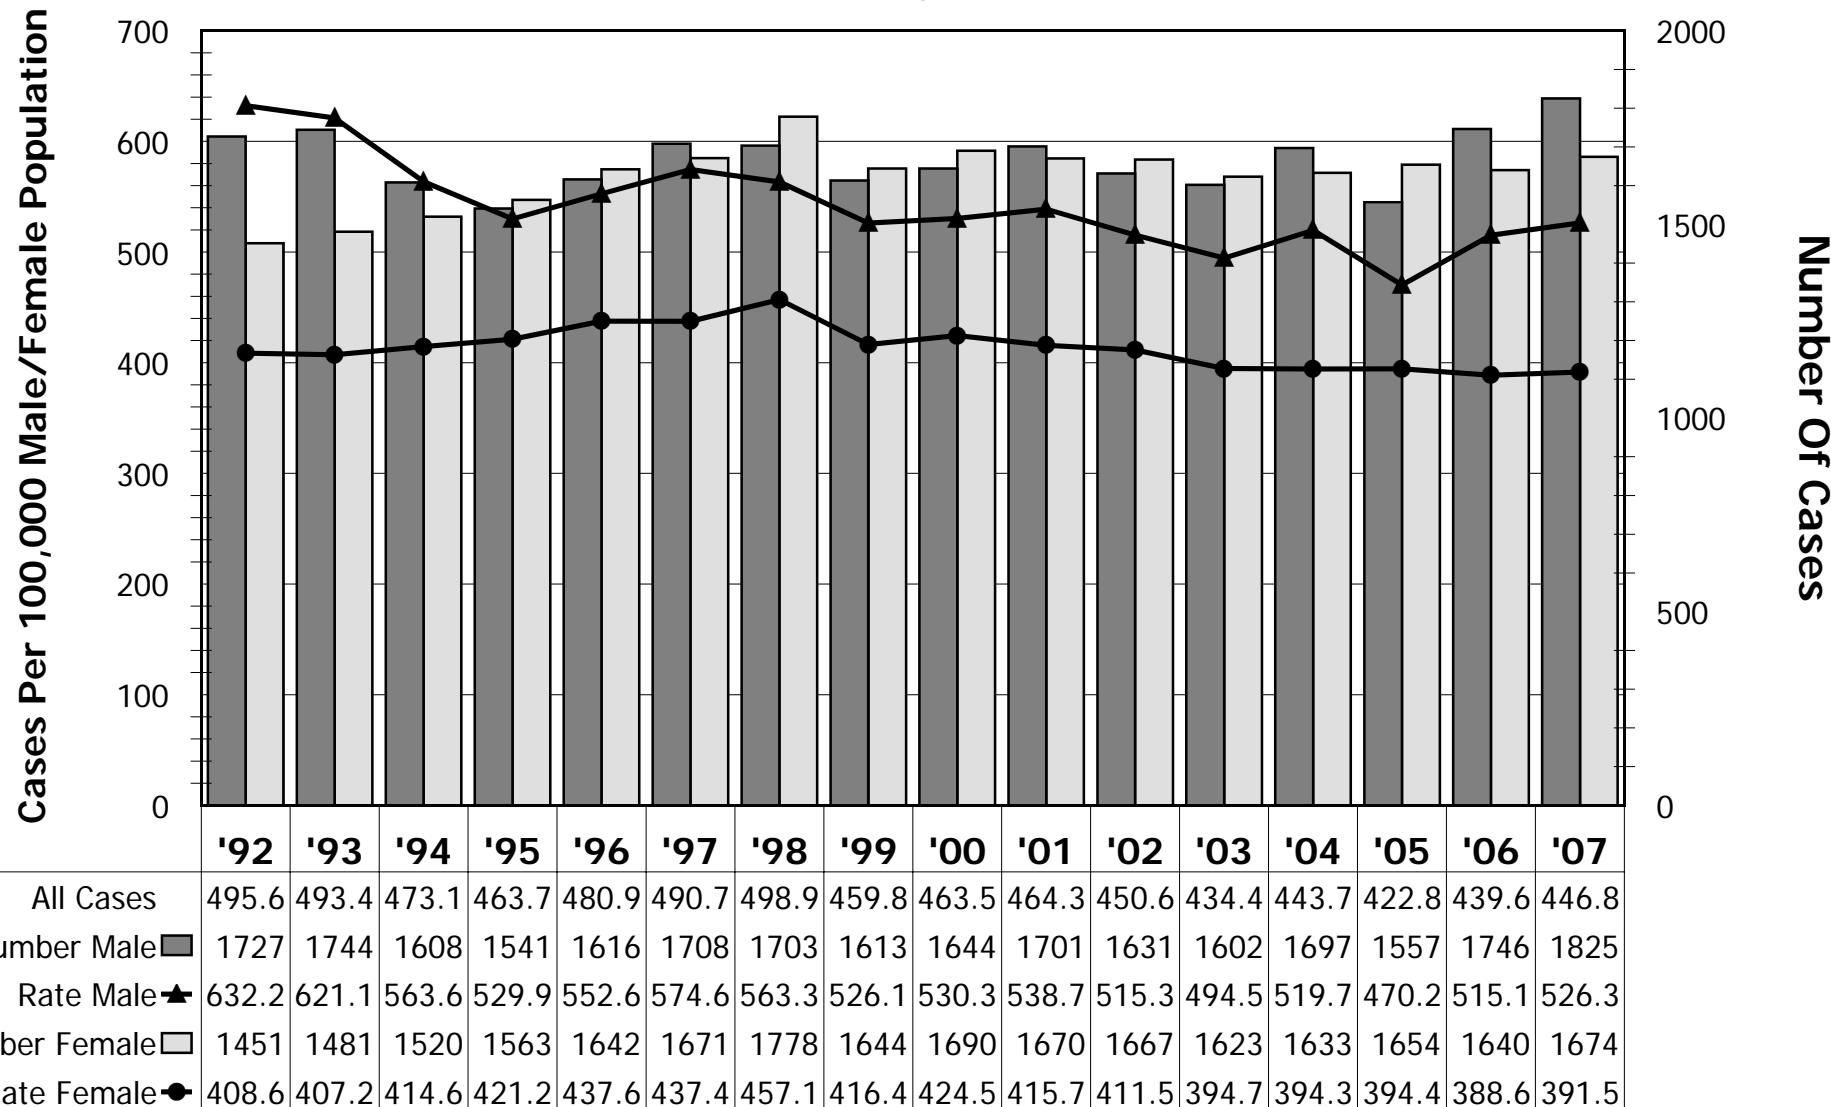

Rates are age-adjusted and standardized to Year 2000 population. Only invasive cancers (not *in situ*) are counted in the incidence calculation.

Source Data: Surveillance, Epidemiology, and End Results (SEER) Program (www.seer.cancer.gov) SEER*Stat Database: Incidence - SEER 13 Regs Research Data, Nov 2009.

CA-1

Incidence Of Cancer By Sex (All Cancer Sites)

San Mateo County, 1992-2007

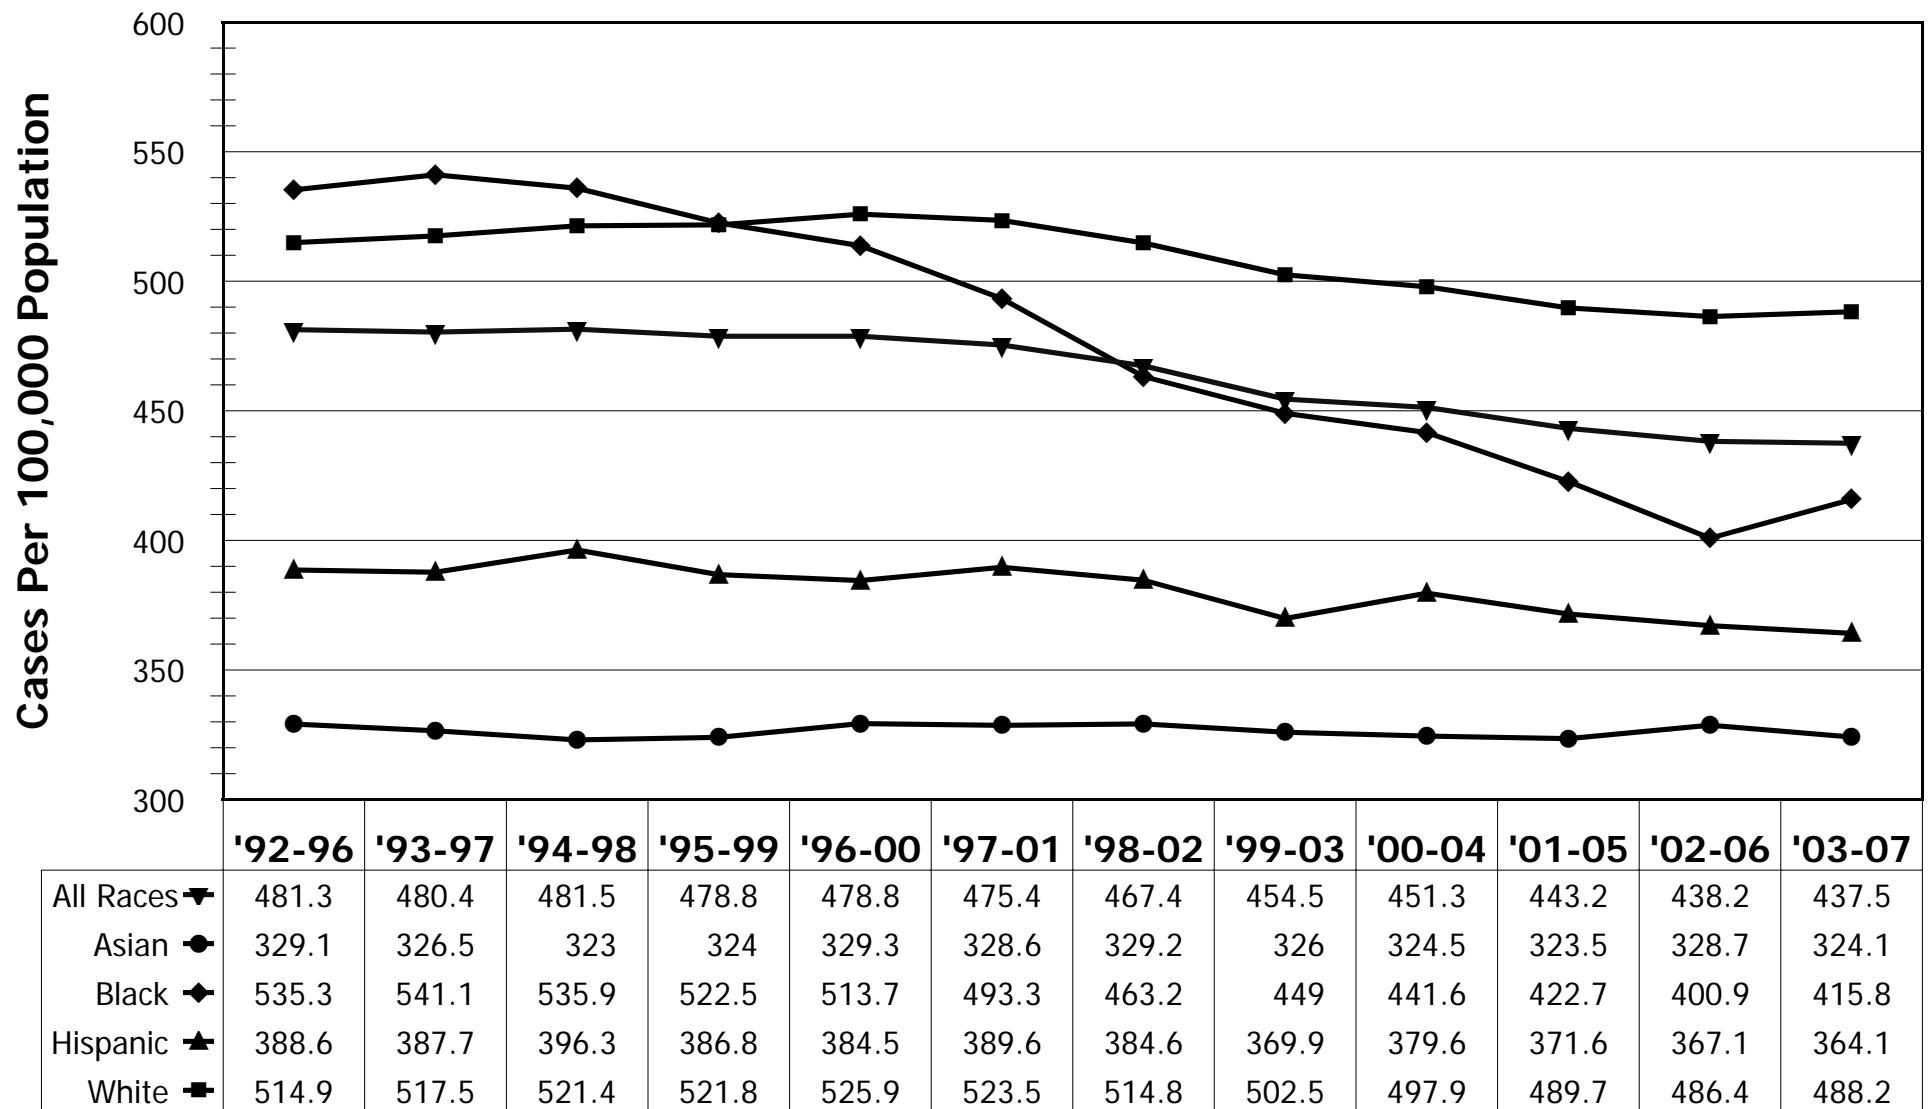

Rates are age-adjusted and standardized to Year 2000 population. Only invasive cancers (not *in situ*) are counted in the incidence calculation.

Source Data: Surveillance, Epidemiology, and End Results (SEER) Program (www.seer.cancer.gov) SEER*Stat Database: Incidence - SEER 13 Regs Research Data, Nov 2009.

Incidence Of Cancer By Race/Ethnicity (All Cancer Sites)

5-Year Moving Averages, San Mateo County, 1992-2007

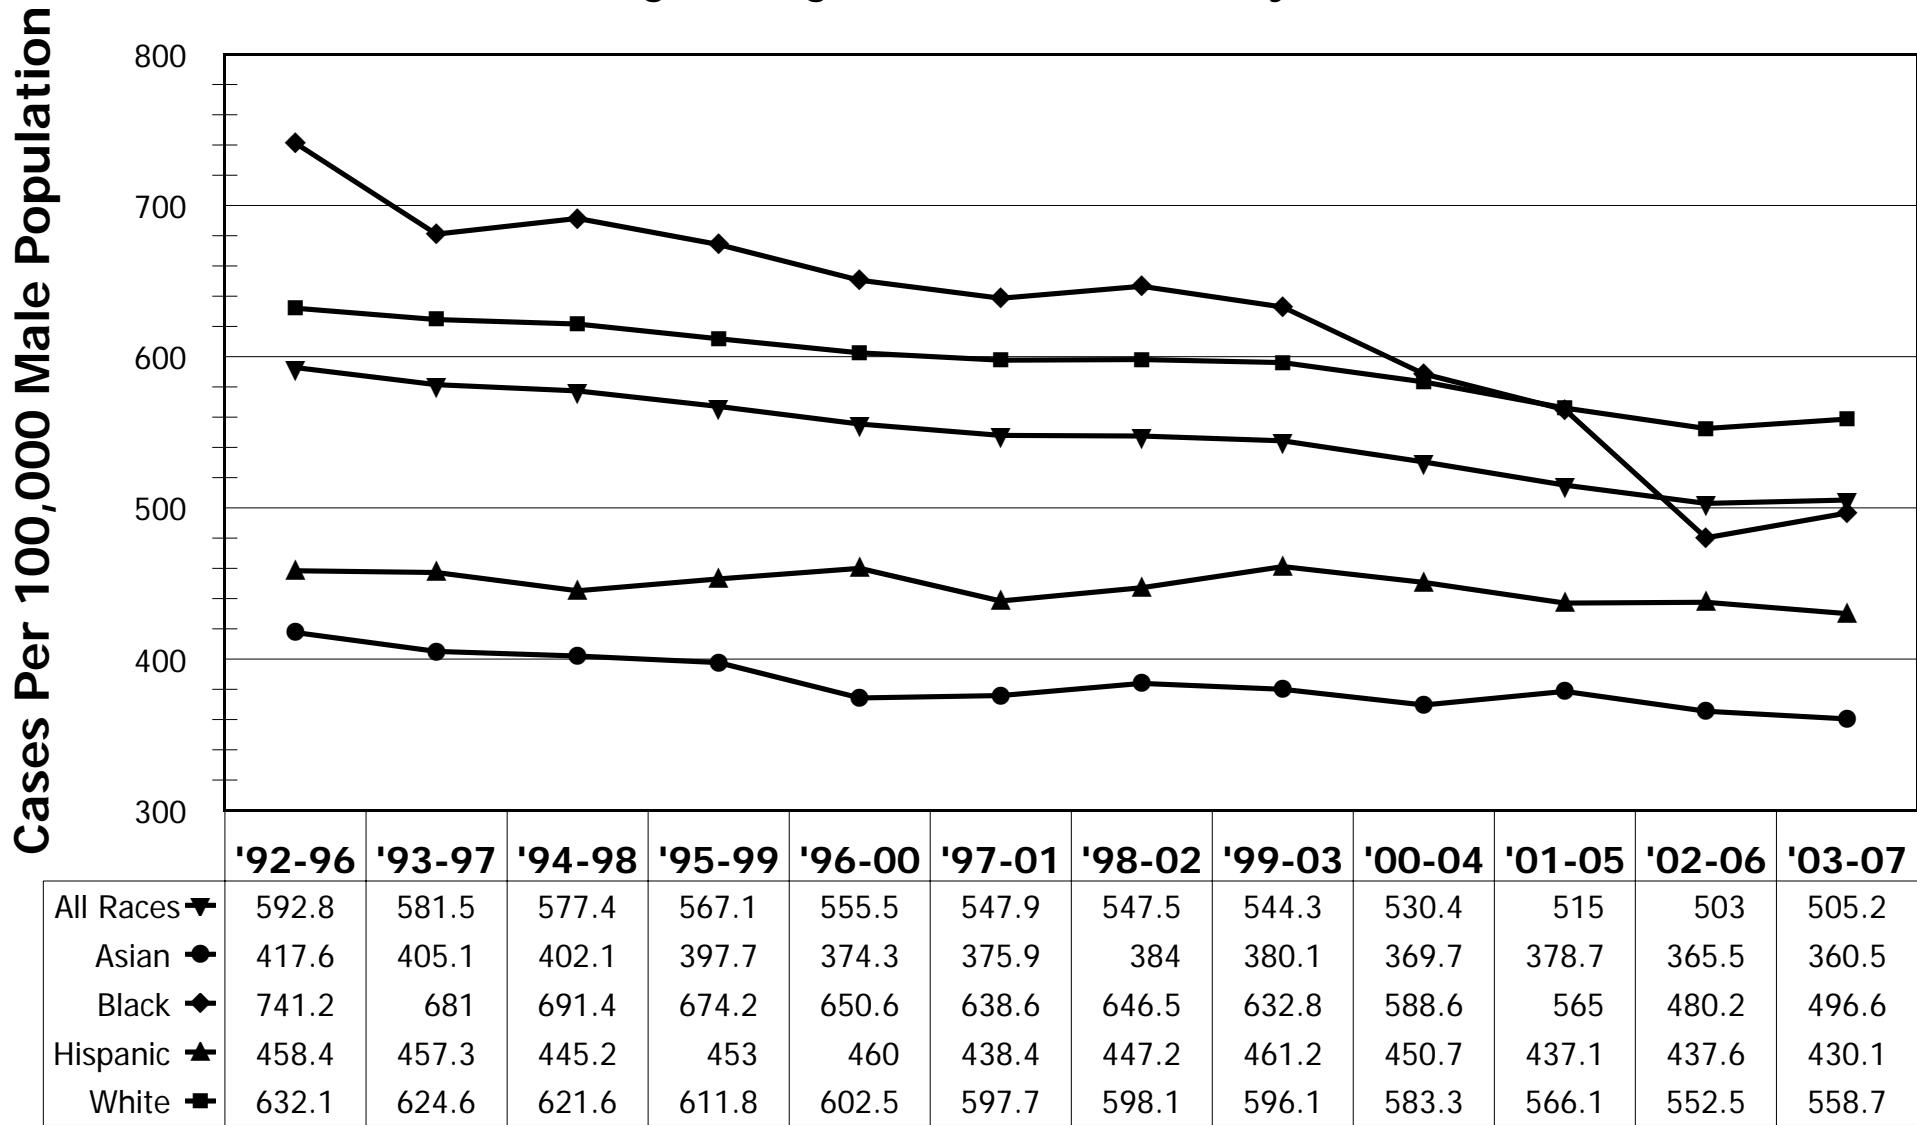

Rates are age-adjusted and standardized to Year 2000 population. Only invasive cancers (not *in situ*) are counted in the incidence calculation.

Source Data: Surveillance, Epidemiology, and End Results (SEER) Program (www.seer.cancer.gov) SEER*Stat Database: Incidence - SEER 13 Regs Research Data, Nov 2009

Incidence Of Cancer In Males By Race/Ethnicity (All Cancer Sites)

5-Year Moving Averages, San Mateo County, 1992-2007

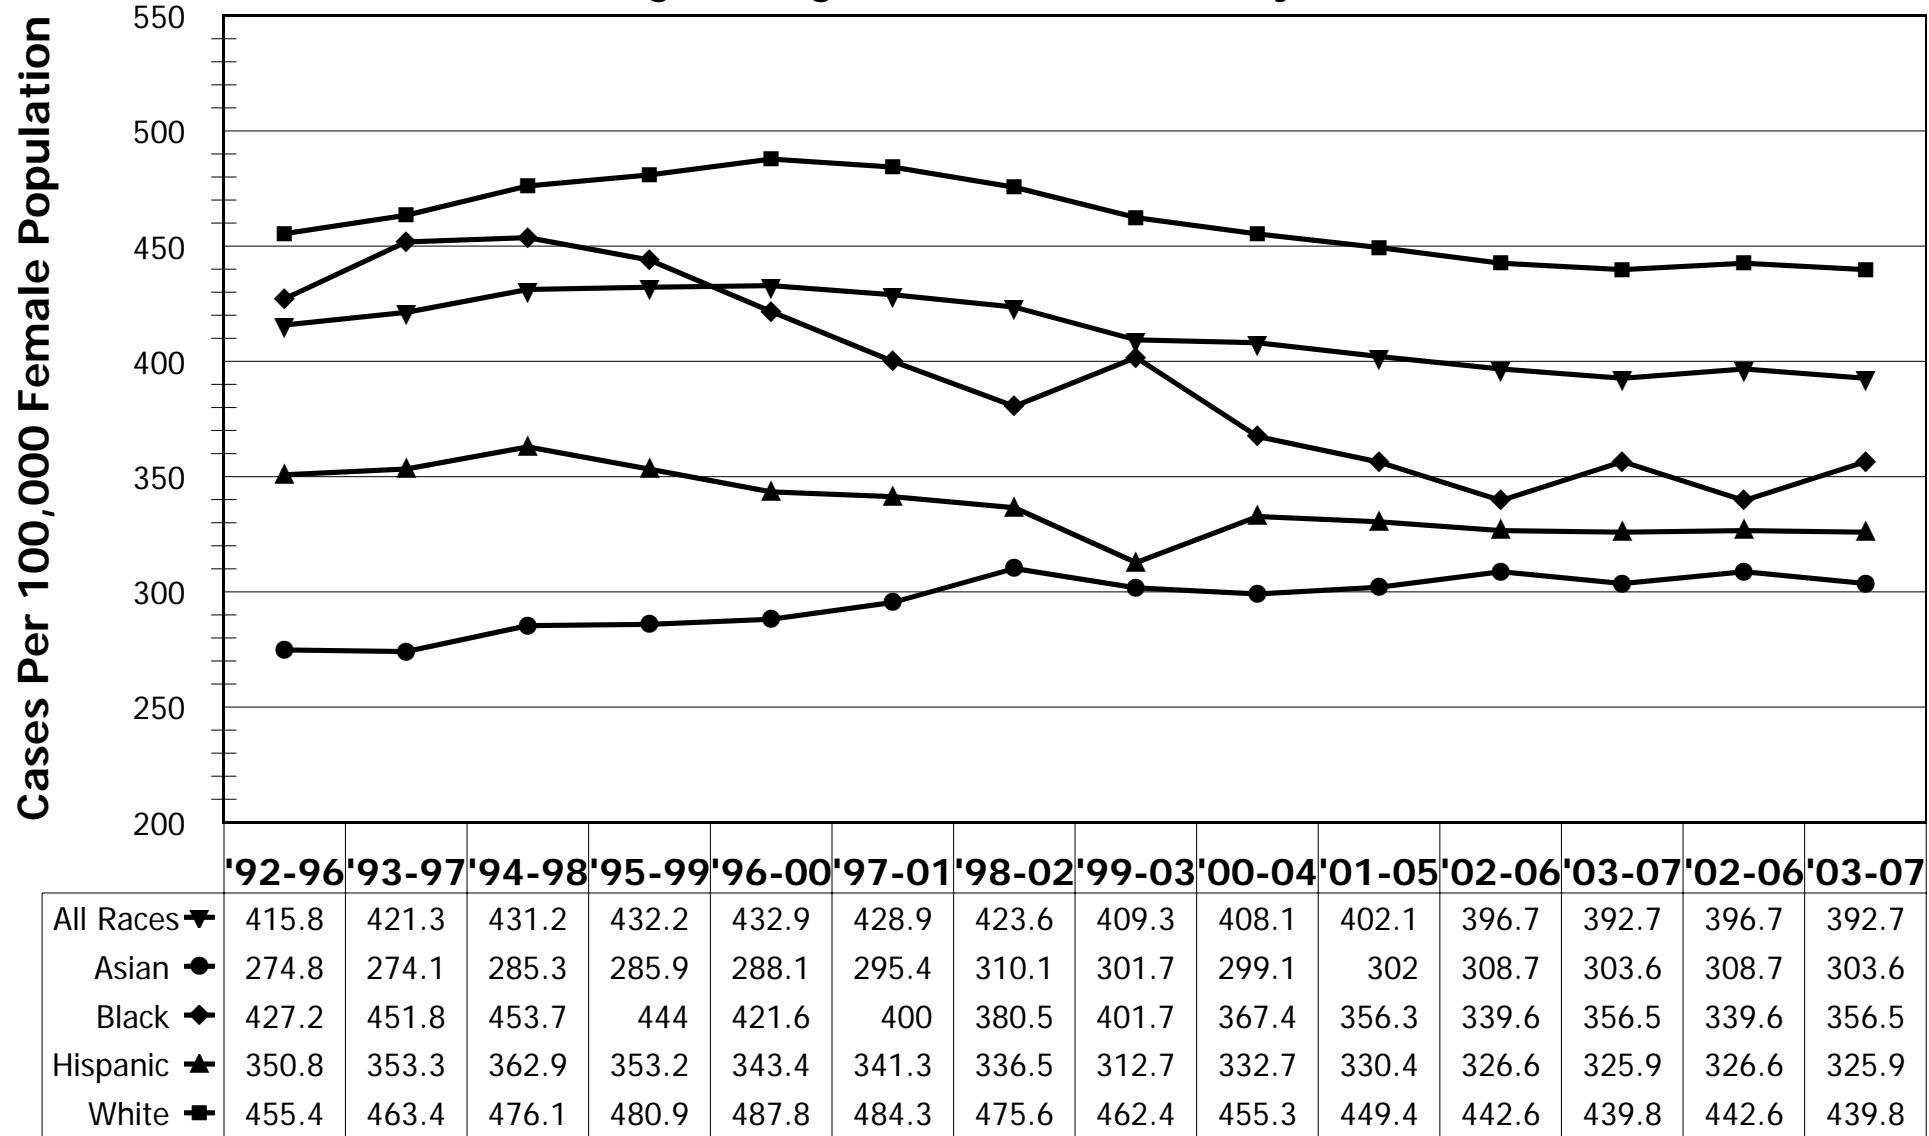

Rates are age-adjusted and standardized to Year 2000 population. Only invasive cancers (not *in situ*) are counted in the incidence calculation.

Source Data: Surveillance, Epidemiology, and End Results (SEER) Program (www.seer.cancer.gov) SEER*Stat Database: Incidence - SEER 17 Regs Public-Use, Nov 2009

Incidence Of Cancer In Females By Race/Ethnicity (All Cancer Sites)

5-Year Moving Averages, San Mateo County, 1992-2007

Rates are age-adjusted and standardized to Year 2000 population. Only invasive cancers (not *in situ*) are counted in the incidence calculation.
